CAREER OBJECTIVE:

To work in an environment which I can apply my skills in React, TypeScript, Tailwind, NoSQL, MySQL, Firebase, HTML, CSS, and JavaScript, while learning from experienced developers and contributing to high-quality web projects.

PROFESSIONAL SUMMARY:

- Self-taught Front-End Developer with a strong understanding of HTML, CSS, JavaScript, and modern front-end practices. I am passionate about building clean, responsive, and user-friendly websites. I am a Quick learner with hands-on project experiences and a strong interest in growing with a professional development team. I seek a junior role where I can learn and continue to grow with my peers and contribute to the team.
- Proficient in writing JavaScript and TypeScript for front-end logic and understanding async/await, including making backend API requests, handling responses, and updating the UI accordingly.
- I have strong React skills, working with functional components, props, and basic state management, and I am seeking a junior front-end role where I can learn from experienced developers and contribute to team goals, and grow professionally alongside peers. As well as using MySQL to work with databases as well as NoSQL as well as Firebase for BaaS.

CORE FRONT-END SKILLS: Semantic HTML and accessibility basics, NoSQL MySQL, PHP, Responsive layouts (Flexbox, Grid), CSS animations and transitions, JavaScript fundamentals, DOM manipulation and events, React fundamentals (components, props, state), TypeScript usage, API fetching (fetch, async/await). Ive also used firebase as a BaaS

SOFT SKILLS: Communication, Critical thinking, Proactiveness, Problem solving, Teamwork, Adaptability

Front-End	HTML 5 CSS 3 JavaScript React TypeScript Tailwind CSS
Back-End	Node.js, Firebase
Database	MySQL MongoDB(NoSQL)
Tools	Git & GitHub VS Code Chrome Dev Tools Figma
Operating System	Windows
MS-office Tools	Excel, Word, Power Point, Outlook
Other	REST API, Responsive Design, Basic SEO & performance awareness

PROJECT EXPERIENCE:

Personal Portfolio:

November 2025 – December 2025

(self-taught / GitHub)

Project Summary: Built a personal portfolio using React and Tailwind CSS

Includes:

- Implemented responsive layouts for mobile and desktop
- Worked with DOM manipulation, events, and basic logic
- Made a fluid and responsive animations

Website Link: <https://nathaniel-dev-portfolio.vercel.app/>

Work Tracker:

May 2026

(self-taught / GitHub)

Project Summary: Built Work Tracker that allows you to select a role as a manager or worker and complete tasks or assign them.

Includes:

- I created a website that allows you to select between being a manager and a worker. Each Role has its own features
- I used firebase as a backend that can store and update information
- I used Tailwind CSS to make a simple design as well as React for reusable components

Website Link: <https://dbmade-work-tracker.vercel.app/>

Work Earning Tracking APP:
(self-taught / GitHub)

April 2026

Project Summary: Built Work Earning Tracker with my own backend using Nodejs and MongoDB and Mongoose in React

Includes:

- I created my own backend with Mongoose and MongoDB which was hosted by Render
- The backend is meant to track the amount of money a person had made in response to the number of hours they clocked-in / worked
- I used Tailwind CSS to make a simple design as well as React for a reusable design

Website Link: <https://dbmade-work-tracker.vercel.app/>

Health Tracking APP:
(self-taught / GitHub)

Feb 2026

Project Summary: Built a functional Health Tracker with Typescript and Tailwind in React

Includes:

- Developed a fully responsive Health Tracking application using React, TypeScript, and Tailwind CSS
- Implemented interactive logic with a strong structure to ensure reliability and maintainable code with a backend for the information of a patient
- Designed a clean, mobile-first UI using Tailwind utility classes
- Structured the project using reusable components within a React environment
- Link: <https://health-tracker-five-ivory.vercel.app/>

React E-commerce Website
(self-taught / GitHub)

September 2025 – December 2025

Project Summary: Built a functional React based E-commerce website able to store and track orders

Includes:

- Built a responsive e-commerce application using React and modern component-based architecture
- I used a TypeScript to help with production error handling and reduce work load in case of errors working with the api
- Implemented product listing, cart functionality, and order tracking
- Integrated external APIs to submit and retrieve order data using async/await
- Focused on reusable components, clean state handling, and readable code structure
- Link: <https://e-commerce-store-xi-five.vercel.app/>

YouTube Clone
(self-taught / GitHub)

April 2025 – May 2025

Project Summary: Built a YouTube clone with HTML, CSS, and JavaScript

Includes:

- Recreated the classic YouTube interface as a front-end learning project using HTML, CSS, and JavaScript
- Focused on pixel-accurate layout, responsive design, and component structure
- Used JavaScript for functionality and to make the website responsive
- Focused on reusable components, clean state handling, and readable code structure
- Website: <https://nathanielmannkanda.github.io/Youtube-clone/>

WordPress login form
(self-taught / GitHub)

Feb 2026

Project Summary: Developed a Pokémon search application that retrieves and displays Pokémon data dynamically using an external API.

Includes:

- Used PHP to Create a layout within WordPress for a login form
- Used Laragon for the SQL database and strong CSS to recreate a photopea based design
- Used CSS to make the website mobile friendly

EDUCATION:

School: Sunward Park High School

National Senior Certificate (NSC), 2024
